Web Page for a Community Event Registration

DIY - 5

© Brain4ce Education Solutions Pvt. Ltd.

Problem Statement:

You are tasked with creating a web page for a community event registration. The web page will include various HTML elements and tags to structure and present the event information effectively. Your goal is to design the web page layout and content using the following HTML tags:

- <form> Tag: Implement a registration form that includes fields for
 participants to enter their name, email address, phone number, and a
 dropdown menu to select their registration type (e.g., attendee, speaker,
 organizer).
- **Table Tags:** Create a table to display the event schedule, including session names, dates, times, and locations.
- **List Tags:** Incorporate lists to showcase the event sponsors and partners.
- Links and Container Tags: Include hyperlinks to the event's social media.
